

Project Name: Group 18 Minesweeper

Project due date: 09/20/2026

Meeting number: 2

Date: 09/17/2026

GitHub link: https://github.com/540jmc17/Group18_MineSweeper

System Documentation link:

<https://docs.google.com/document/d/1PSBZjo6ps6Ti3DJZncdNMmsn6wWcSM94/edit>

Previous Tasks:

E.g Jupiter: Implemented the number of mines option on the UI

Karim Lakhani: Zema and I worked together on the “[settings.py](#)” file, this file was focused on making sure the constraints were correct.

Jake Crawford: I have been working on System Architecture, and am getting close to finishing it up. Just making sure that it follows all the requirements on the Minesweeper home page. I have just honestly been the Introduction and the high level architecture, and just need to put a few things together and final review but basically finished. Just to make sure that the flow chart works with everything works smoothly.

John Pannell: I have completed my assigned sections of the system architecture. Also, I have started implementing the main.py file with initialization and documentation for the Minesweeper system. I have worked on the meeting notes/logs for our previous meetings.

Zema Samuel: Collaborated with Karim on developing the settings file for the project. Focused on creating the constants for color and screen size.

Pranav Reddy: Focused on the Architectural Components input handler (describing the input handler), working closely with Cameren.

Cameren Green: Worked on architectural components as well as implementations of the board logic with Pranav

Nathaneal Getahun: I created a flowchart using Mermaid.

This Week's Task:

E.g Jupiter: Implemented the number of mines option on the UI

John Pannell: Complete and finish implementing and testing main.py with Jake. Upload all meeting notes and finish checking the system architecture to upload to GitHub. Also, I need to add my person hours to the file on GitHub.

Cameren Green: Review code and make sure it works when merged with main team and settings team.

Karim Lakhani: Finish and test implementation.

Pranav Reddy: Need to test and review the [sprites.py](#) implementation. Share issues found with Cameren. Also Cam + I coordinating with [main.py](#) team to ensure smooth transfer.

Jake Crawford: I am working on the revising and helping test and work on the features for the Reveal mines after a loss, win detection, game display / HUD, Game-Over / Restart handling, Game startup / mine selection.

Zema Samuel: Test implementation after the merge.

Nathaneal Getahun: Finish person hours estimate

Ahmed: Complete person hours estimate and the calculations like class.

Notes:

- **Merge all files together**
- **Finish architecture document with all sections completed**
- **Organize GitHub with all components and documentation**
- **Finish updating README**
- **Include person hours estimate and actual person hours documents**
- **Test and confirm quality of the whole working system**

***System architecture (include the Personal-Hour estimation using the methodology discussed in class and actual personal hours)* -----Should be included on GitHub**

****** Please submit the peer evaluation form*******
